## EDUCATION AND TRAINING

2010-2014	PhD in Experimental Medicine University of Rome "Sapienza", Italy
2005-2009	Cardiology Specialty University of Rome "Sapienza", Italy
1999-2005	Medical Degree, <i>magna cum laude</i> University of Rome "Sapienza", Italy

## WORK EXPERIENCE

2018-2022	Associate Professor  Department of Medical and Surgical Sciences and Biotechnologies, University of Rome "Sapienza", Italy
2015-2018	Assistant Professor

	Department of Medical and Surgical Sciences and Biotechnologies, University of Rome "Sapienza", Italy
2013-2015	Assistant Professor
	Department of Cell Biology and Molecular Medicine, Rutgers New Jersey Medical School, NJ, USA
2009-2013	Post-Doctoral Fellow
	Department of Cell Biology and Molecular Medicine, Rutgers New Jersey Medical School, NJ, USA

<b>Personal Statement</b>	<p>I am a physician scientist and my scientific career has always been devoted to the study of the molecular mechanisms underlying the development of cardiac and vascular diseases, by conducting basic and translational studies.</p> <p>At the beginning of my career I studied the impact of metabolic derangements on organ damage in essential hypertension. Then, I started studying the signaling mechanisms underlying the development of cardiac hypertrophy and vascular dysfunction. Then, I moved to Rutgers-New Jersey Medical School (Newark, USA), where I studied the role of autophagy in the development of myocardial hypertrophy, ischemia and cardiac remodeling. After 6 years in the US, I moved back to Italy at Sapienza University of Rome to start my career as independent investigator. The research interests of my laboratory are focused on the study of the signalling mechanisms underlying vascular diseases, with a particular focus on autophagy, oxidative stress, mTOR pathway and Hippo signalling. During the last years, we conducted several basic and translational studies investigating the role of autophagy abnormalities in the development of endothelial dysfunction, atherothrombotic disease and stroke in models of hypertension and diabetes. We also studied the molecular mechanisms underlying platelet hyperaggregation and endothelial dysfunction in response to cardiovascular risk factors, such as smoking and diabetes. In the future, I hope to succeed in finding new therapeutic targets for the treatment of vascular abnormalities, in order to develop novel therapies to ameliorate the clinical outcome of patients with cardiovascular diseases. Based on the results of my research studies, I patented a new mixture of natural activators of autophagy, which may be efficacious, in addition to the other therapies, for the treatment of cardiovascular diseases. My future aim will be to develop a partnership with industries for the production of these compounds and their evaluation in the clinical setting.</p>
